

Module 5: Clean Up and Next Steps

 web.archive.org/web/20230610090838/https://aws.amazon.com/getting-started/hands-on/create-manage-nonrelational-database-dynamodb/module-5

Getting Started with AWS

Create and Manage a Nonrelational Database

with Amazon DynamoDB

To finish this experiment, you will clean up the resources created in this tutorial

Overview

Congratulations! You have completed this DynamoDB tutorial and have worked through the basics of working with DynamoDB by using an HTTP API. Follow the steps in this module to delete the resources you created in this project.

For more information about DynamoDB, see the following resources:

- Best Practices for DynamoDB
- On-Demand Backup and Restore for DynamoDB
- Global Tables
- In-Memory Acceleration with DynamoDB Accelerator (DAX).

Find this information and more in the Amazon DynamoDB Developer Guide.

Time to complete

15 minutes

Implementation

- Delete your DynamoDB table

You can delete a DynamoDB table by using the *DeleteTable* API. There is an example in the *delete_table.py* script.

Delete your table by running the following command in your AWS Cloud9 terminal.

```
$ python delete_table.py
```

The resulting output should show that the table was deleted successfully.

- Delete your AWS Cloud9 environment

To delete the AWS Cloud9 environment that you used to run your commands:

1. Go to the AWS Cloud9 console and choose **Your environments** from the left navigation pane.

2. Choose your DynamoDB Deep Dive environment and choose **Delete**.

3. In the dialog box, enter **Delete** in the box, and choose **Delete**.
